

The Orthopedic Center of St. Louis strives to provide the highest quality, comprehensive care for your orthopedic problems under one roof in a convenient, personalized setting. So that we may quickly and accurately diagnose injuries, we have arranged for state of the art diagnostic equipment to be located in the same building as our Center. This includes digital x-rays on the 2nd floor, a high resolution MRI scanner and CT scanner at Imaging Partners of Missouri and CT Partners of Chesterfield on the 1st floor, and electrodiagnostic testing at NEI on the 3rd floor. To facilitate instituting treatment programs in an efficient, timely manner, the Timberlake Surgery Center is located on the 1st floor to provide outpatient surgical services. This state of the art facility is staffed with experienced nurses and staff that work closely with our physicians to provide the highest quality specialized care in an efficient, personalized fashion. The St. Louis Spine and Orthopedic Surgery Center is located nearby and provides care for spine patients and orthopedic patients that may require an overnight stay. The Corner Pharmacy is available to deliver prescriptions to families and loved ones in the waiting room at the surgery center so that after surgery, there is no need to stop and wait at the pharmacy to get prescriptions filled. Physical Therapy services are available at PRORehab on the 3rd floor to institute therapy or have custom splints made the same day as your visit to TOC, if necessary.

Dr. Krause and his partners at TOC have an ownership interest in some of these facilities. You have complete freedom of choice as you select your providers. Dr. Krause would be happy to provide you with the names of other service providers if you would prefer, and his office will coordinate setting up appointments with a provider of your choice.

We appreciate the opportunity to serve you.
